EXPERIMENT 1
ANALYSIS OF GOOD DESIGN AND BAD DESIGN

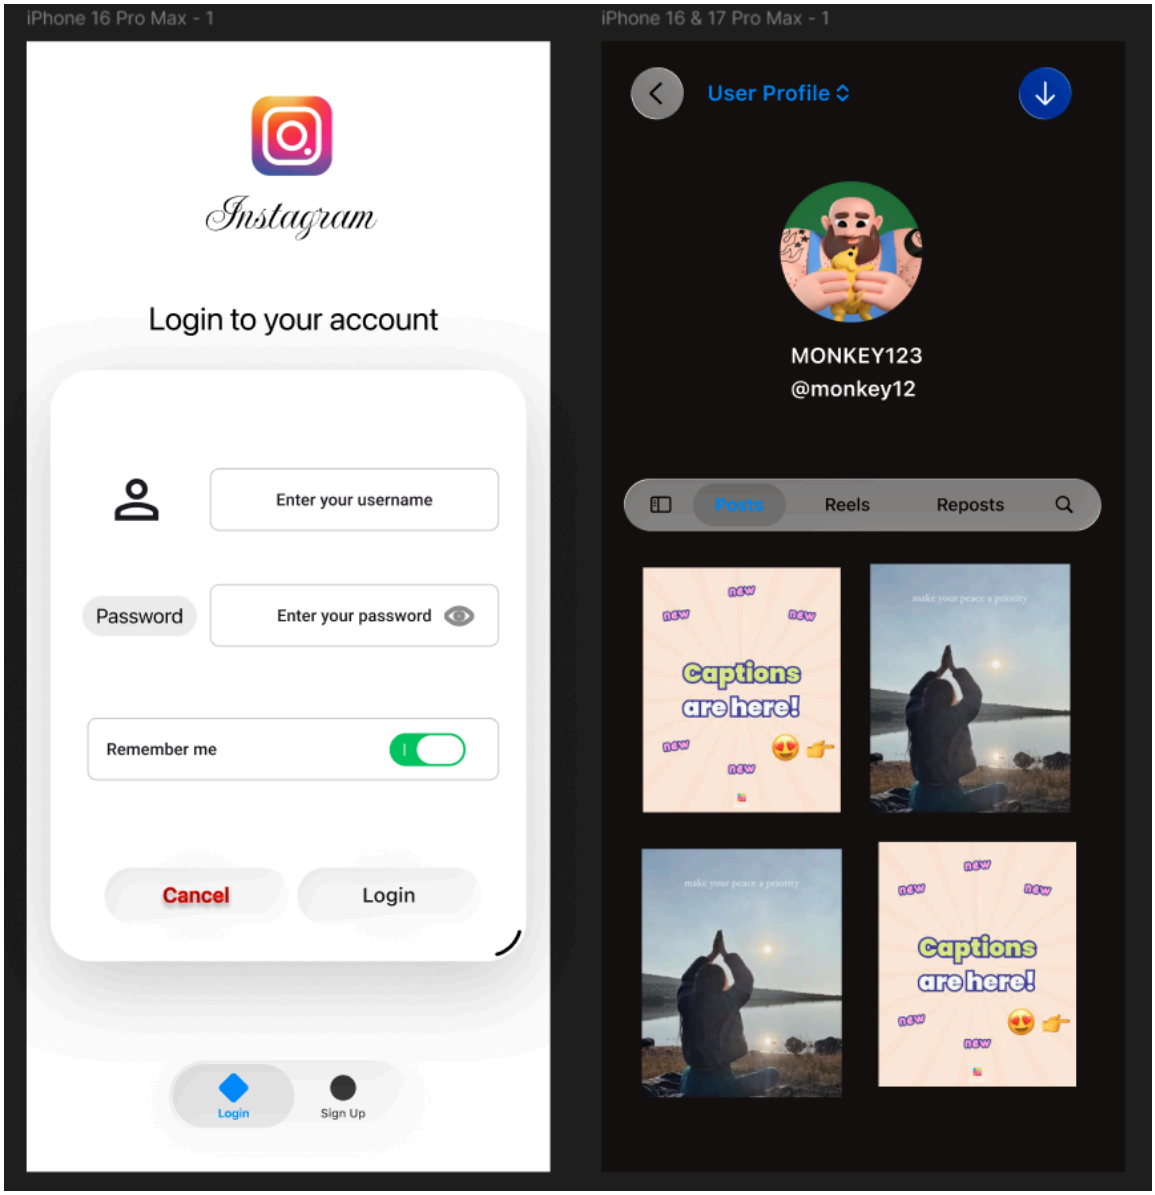
GOOD DESIGN

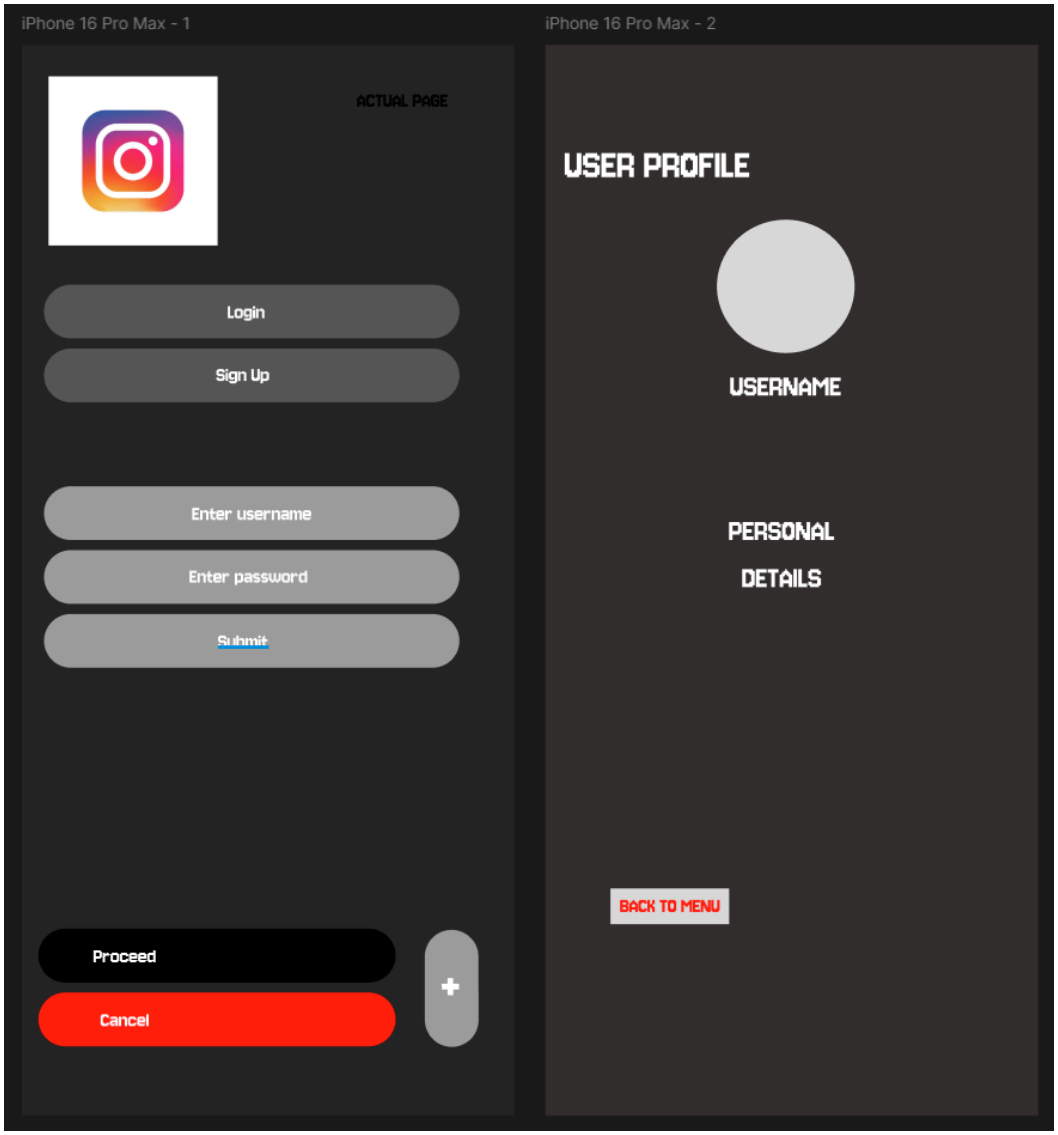


Analysis of Good Design

The first image demonstrates a professional understanding of user-centered design, prioritizing **clarity, visual hierarchy, and affordance.**

- **Visual Hierarchy:** The design uses different font weights and sizes to guide the eye. The Instagram logo is prominent, followed by a clear "Login to your account" heading.
- **Accessibility & Affordance:** Input fields are clearly defined with rounded borders and "Ghost text" (placeholders) that tell the user exactly what to do. The use of a "Password Visibility" (eye) icon is a standard convention that improves user experience.
- **Color Theory:** It utilizes a clean white background with subtle shadows (elevation) to separate the login card from the background. The "Cancel" button in red provides a clear warning, while the "Login" button uses a neutral tone to avoid overwhelming the user before they've entered data.
- **Consistency:** The profile page follows a logical grid system for posts, and the iconography (back arrow, download, search) is intuitive and universally understood.

BAD DESIGN



Analysis of Bad Design

The second image serves as a "Bad Design" example because it violates several **Heuristic Evaluation** rules, leading to a frustrating user experience.

- **Poor Contrast & Readability:** The use of a pixelated, "gaming-style" font for a standard social media interface makes the text difficult to read quickly. The white-on-grey contrast in the input fields is low, which can be an accessibility barrier for visually impaired users.

- **Redundancy & Confusion:** The login page features two sets of "Login/Sign Up" buttons. Having a "Login" button at the top and a "Submit" button in the middle, followed by "Proceed/Cancel" at the bottom, creates **cognitive overload**. The user doesn't know which button actually triggers the action.
- **Lack of Content Context:** The "User Profile" page is extremely sparse. In UI design, "Negative Space" is good, but "Empty Space" without a clear purpose feels unfinished. There is no grid for photos, and the labels "PERSONAL DETAILS" are just text blocks without actual data fields or interaction points.
- **Inconsistent Component Styling:** The "Back to Menu" button uses a different font color (red) and a boxy shape that doesn't match the rounded pills used on the previous screen, breaking the **Internal Consistency** of the app.

A "Good Design" prioritizes the user's journey by reducing friction, whereas the "Bad Design" creates "Dark Patterns" or confusion through inconsistent styling and redundant action triggers.

Feature	Good Design (Image 1)	Bad Design (Image 2)
Typography	Clear, modern, and legible.	Stylized "pixel" font; hard to read.
Navigation	Intuitive icons (back, search).	Redundant buttons (Login vs Submit vs Proceed).
Feedback	"Remember me" toggle shows clear state.	Buttons lack clear hierarchy or state.
Layout	Balanced use of white space and grids.	Disorganized; high cognitive load.

A "Good Design" prioritizes the user's journey by reducing friction, whereas the "Bad Design" creates "Dark Patterns" or confusion through inconsistent styling and redundant action triggers.
